for Sixty Herald Subscribers.

The Young America 315 Long Distance Safety is made of steel and wood so combined as to secure the lightest and strongest machine. The frame and wheels are made from the best quality second growth hickory, which is selected instead of steel for these parts because it combines great strength and toughness with lightness.

An all-steel machine made heavy exough to withstand the hard usage to which it is subjected is scheavy as to be a serious drawback to its universal use by young people. Again, the steel machines, without the greatest care being taken to keep them clean and dry, soon become rusted and therefore easily broken; whereas a machine made of steel and wood will not suffer from exposure any more than a carriage.

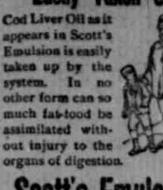

posars any more than a carriage.

A hickory framed and wheeled safety is not only more durable and lighter, but it is much more elastic, and the loss of the vibration and rigidity found in the all-steel machines makes these steel and hickory machines more comfortable for riding than any other machine made. for riding than any other northine made. The cushioned seat is suspended on our The cushinned seat is suspended on our patented spiral spring, adjustable to varying heights and weights, and this, in combination with the hickory frame, makes the easiest possible riding machine. The sprocket wheel chain is perfectly adjusted, so as to utilize the full amount of power expended, and is made so strong as to be practically unbreakable. The patented head, found only on this machine, is a triumph of American improunty, and makes the wood and steel conjunction perfectly strong and firm. For these parts only the best imported weightest steel tubing is used. The rubber cushion tire is secured to the wheel rim in such a manner that it is guaranteed not to become detached or losse. The wheel bearings are a brass collar so delicately adjusted to the steel shaft as to reduce the friction to a minimum, and render the usual ball bearings superfluous. The principle upon which they are made is the same as is used in constructing heavy machinery, where the greatest amount of week remait he measured from the least ay se is used in constructing heavy machinery, where the greatest amount of work must be secured from the least expenditure of power. The outer machine is finished with a heavy coat of glossy black enamel, making a finely finished said surface, which, when lightened up by its delicate striping and nickeled head frame makes a most beautiful machine, which for tasty appearance as well as positive durability and general searing qualities is absolutely unexcelled, if equaled, by any machine offered. The quality of materials used and the workmanship are fully guaranteed in every particular. Read Tux Henanc's add to learn how to get a machine free.

EXHIBITION OF THE REIGHING QUEENS OF FASHION.

A Profusion of Parisian Styles for Fall of '93 Gathered Expressly for Michgan's Fair Women.

Our responsibility as FASHION CATERERS and the knowledge that we are looked to for all that's new, fashionable and correct by the ladies of Western Michigan at the beginning of each season is one which we keenly appreciate. The honor of introducing to this territory the new thoughts of the civilized world as the seasons roll around impells us to greater, broader and more comprehensive ideas, and an excusable pride in excelling even ourselves. For weeks the fashion chrysalis has been steadily developing at
